

Abstract of the Disclosure

A protective hand covering for adhering to the user's hand. Pressure-sensitive adhesive is applied to the back surface of a sheet of thin flexible film, which is shaped
5 to cover a protected area of the users hand. The pressure-sensitive adhesive provides a sufficiently strong bond to prevent the hand covering from being inadvertently dislodged, but a sufficiently weak bond to allow the hand covering to be removed without injuring the user. The film is sufficiently
10 impervious to contaminates to prevent the transfer of contaminates from the substance or object being handled to the user and vice versa.
